RIGHT TO WORK IN THE ISLE OF MAN (DEPENDANT VISA) | AVAILABLE IMMEDIATELY

SUMMARY

I spent a year in Brussels recruiting data analysts and developers for **banking, insurance and public sector clients**, then **four years running the daily operations of a 440-tonne/year fruit production business**, with a seasonal workforce of 50+ and a product that has to be sold the day it is picked.

When I arrived, the day's harvest and sales were still **totalled by hand on paper**. I moved them onto **live shared spreadsheets** and put the admin into one shared reference. Then I trained in Python, SQL and data analysis and **designed and built Cropia**, which now runs the daily harvest and stock tracking there and forecasts yield plot by plot ahead of planting decisions.

That is the work I want to keep doing: go and see how a process actually runs, find where the information breaks, and build what makes it measurable.

KEY SKILLS

- **Business analysis:** business process analysis, requirements gathering, as-is and to-be process mapping, stakeholder engagement, process improvement and automation
- **Data and analytics:** SQL (PostgreSQL), Python (pandas, NumPy), Excel and Google Sheets (advanced), data modelling, data cleaning and consolidation, trend analysis, dashboard design
- **Development and tools:** JavaScript, React, Node.js, Git, Notion, Google Workspace
- **Languages:** French (native), English (C1), Portuguese (C1), Spanish (B2)

PROFESSIONAL EXPERIENCE

SELF-EMPLOYED

FEB 2025 - PRESENT

BRAJY (REGISTERED BUSINESS) - FRANCE/ISLE OF MAN

- Designed, built and deployed Cropia, an end-to-end harvest management and analytics tool, used daily to support harvest planning, stock tracking and planting decisions at Etablissement Brajon Frères (440 tonnes/year, 50+ seasonal staff)
- **Gathered requirements directly from the operations team**, mapped the existing paper, Excel and Notion workflow, and designed the target process
- Consolidated three legacy data sources into a single structured data model, turning 10 years of inconsistent production records into one consistent history to plan from
- Built the daily operational dashboard used to track harvests, sales and projected stock across **around 60 plots and 20 varieties**
- Developed a **plot-level yield forecast** combining supplier yield curves with historical field performance
- Currently supporting its first full harvest season in production

Stack: Python (pandas, NumPy), PostgreSQL, JavaScript (React)

SALES & OPERATIONS MANAGER

JAN 2021 – JAN 2025

ETABLISSEMENT BRAJON FRÈRES – CENDRIEUX, FRANCE

- Managed daily operations for a production of **440 tonnes/year** (400t strawberries, 40t raspberries) with a **seasonal workforce of 50+**
- Ran the **daily supply and demand cycle for a perishable product**: collected next-day harvest estimates by plot and variety from field supervisors, consolidated them into available volume, and allocated that volume across supermarket, wholesale and retail customers on calls from 6am
- **Negotiated price and quantity** with **national supermarket and specialist produce chains** (Système U, Grand Frais), using the previous week's sales and next-day availability to anticipate demand, rationing allocation in short supply and pushing volume in gluts
- **Digitised the daily harvest, sales and stock reconciliation**, replacing handwritten paper records with live shared spreadsheets and giving the office and accounts one current figure instead of hand-totalled sheets
- Surveyed every strawberry plot bag by bag to build a **digital plot inventory**, used to estimate material requirements and plant orders, laying the groundwork for Cropia's plot-level forecasting
- Replaced fragmented paper files with a **single shared operational reference** covering workforce, vehicle fleet, telecoms and employer-entity compliance tracking
- Resolved delivery disputes with hauliers, tracing missing pallets and filing claims where deliveries could not be recovered

TECHNICAL RECRUITER

DEC 2019 – DEC 2020

MALTEM CONSULTING GROUP – BRUSSELS, BELGIUM

- Recruited technical profiles (data analysts, developers, consultants) for clients in **banking, insurance and public institutions**
- Managed the **full recruitment lifecycle** and conducted high-volume screening interviews covering skills, problem-solving and role fit
- Translated client role requirements into candidate specifications, working directly with hiring managers
- Produced written communications for clients and consultants across the practice
- Maintained structured candidate pipelines using LinkedIn Recruiter and internal tools
- Led interviews in English and Portuguese across EU markets

EARLIER EXPERIENCE

- **2019** | English Instructor, Brazil (6 months): delivered structured English courses to adult learners
- **2017 – 2018** | Au pair, United Kingdom (1 year)
- **2016** | Import/Export Intern, José Santiago, Puerto Rico (4 months): international trade operations

EDUCATION & TRAINING

MICROSOFT CERTIFICATION: POWER BI DATA ANALYST ASSOCIATE (PL-300)

STARTED JUNE 2026

Data preparation and modelling, DAX, Power Query, report and dashboard design

DATA SCIENCE & MACHINE LEARNING PATH - KAGGLE LEARN

2025

Python and pandas, SQL and query optimisation (BigQuery), data visualisation, supervised machine learning

FULL-STACK JAVASCRIPT - WEB DEVELOPMENT BOOTCAMP

2024 | O'CLOCK SCHOOL

React, Node.js, Express, PostgreSQL, REST APIs, Git, agile methodologies, unit testing, deployment

BACHELOR'S DEGREE – APPLIED FOREIGN LANGUAGES FOR INTERNATIONAL TRADE

2012 – 2016 | UNIVERSITÉ DE LIMOGES

International trade and import/export operations, negotiation, business and economics, professional writing and translation (English, Spanish)
